DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

2. Claims 1-31 are allowed over the prior art of record.
3. The following is an examiner's statement of reasons for allowance:

Regarding claims 1, the prior art fails to disclose or make obvious a wave-front aberration measuring method having the steps of measuring aberration components of a first set of orders out of a plurality of aberration components obtained by expanding the wave-front aberration of the optical system using a predetermined basis and calculating correction information for aberration components of a second set of orders, based on an aberration component of a predetermined order out of the measured aberration components of the first set of orders, and in combination with the other recited limitations of claims 1. Claims 2-7 are allowed by the virtue of dependency on the allowed claims 1.

Regarding claim 8, the prior art fails to disclose or make obvious a wave-front aberration measuring apparatus which measures a wave-front aberration of an optical system having a storage unit that stores correction information for aberration components of a second set of orders, the correction information being calculated based on an aberration component of a predetermined order out of aberration components of a first set of orders out of a plurality of

aberration components obtained by expanding the wave-front aberration of the optical system using a predetermined basis, and in combination with the other recited limitations of claim 8.

Claims 9-15 are allowed by the virtue of dependency on the allowed claim 8.

Regarding claim 16, the prior art fails to disclose or make obvious a wave-front aberration measuring method with which to measure wave-front aberration of a projection optical system that projects a pattern onto a substrate having the steps of measuring aberration components of a second set of orders out of aberration components of a first set of orders included in a wave-front aberration of said projection optical system; and correcting said measured aberration components of said second set of orders, based on a predetermined order that is included in aberration components of said first set of orders and not included in aberration components of said second set of orders, and in combination with the other recited limitations of claim 16. Claims 17-23 are allowed by the virtue of dependency on the allowed claim 16.

Regarding claim 24, the prior art fails to disclose or make obvious a wave-front aberration measuring apparatus which measures wave-front aberration of a projection optical system that projects a pattern onto a substrate having a measuring system arranged in said projection optical system, which measures aberration components of a second set of orders out of aberration components of a first set of orders included in a wave-front aberration of said projection optical system; and a correcting unit coupled to said measuring system, which corrects said measured aberration components of said second set of orders, based on a predetermined order that is included in aberration components of said first set of orders and not included in aberration components of said second set of orders, and in combination with the other recited

limitations of claim 24. Claims 25-31 are allowed by the virtue of dependency on the allowed claim 24.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
